

Reference Designs for the SMA and SMTPA Boards

OVERVIEW

This document gives the complete schematics for the SMA and SMTPA products from SensL.

The board schematics are accurate representations of the circuitry of the SensL products. The schematics can be used by the customer for their own readout solutions, but this is at the customer’s own risk. Complete Gerber and board specification files for each product are available from SensL upon [request](#).

Identifying SMA Board Version Number

There are multiple versions of the B-Series and C-Series SMA boards, so it is important that the user consults the correct schematics and CAD. To do this, the version number of a given board can be determined by looking at the rear of the board. The version number is given after the part number and takes the form “V3.0”, as in the example on the left.

* See page 2 for help in identifying a board's version number.

SMA Board CAD

The CAD for each board can be viewed and downloaded from the links below. Note that the CAD may apply to multiple silicon types of a given size and version, e.g. the CAD for the MicroFX-SMA-100XX is applicable to either M-Series, B-Series or C-Series variants of that board.

To find the version of a given board, please consult the advice on page 2.
